PROUDLY PRESENTED BY The Concrete Pumping Association of Australia Inc.

The Concrete Pumping Association of Australia Inc.

The members and committee of the Concrete Pumping Association developed the concept of the pumpers Expo and Picnic in 2001 as a forum for benefiting the concrete pumping industry through informal discussion and education that may lead to a safer and more prosperous industry.

The "Pumpers Expo and Picnic" is the only organised function in the southern hemisphere that provides pump owners and suppliers the opportunity to get together for the benefit of members, non-members and the pumping industry in general.

Executive Committee Members 2012/13

President:	Andrew Mitchell	Mitchcon Pty Ltd	VIC
Vice President:	Matt Boyer	Rapid Crete Pty Ltd	VIC
Secretary:	David Thomas	Schwing Australia Pty Ltd	NSW
Treasurer:	David Bond	CPE Machinery Pty Ltd	NSW

Committee Members 2012/13

Peter Loveday	Coastwide Pumping Pty Ltd	NSW
Anthony Mattar	Belconnen Concrete Pty Ltd	ACT
Ian Olifent	Meals Concrete Pumping Pty Ltd	QLD

We wish to take this opportunity to thank the exhibitors, advertisers, sponsors, members and visitors who have contributed greatly to the success of the picnics and in particular the previous and current committee members and marshals who have donated their time and effort to ensure the ongoing success of the pumper's picnic.

We would like to thank Pix Jonasson, Success Dynamics Group, for coordinating the 2013 Magazine and organising the Expo; Snap Printing (Port Macquarie) for printing the magazine; and Snap Printing (Wetherill Park) for printing the Association's Logbook and safety products.

A handwritten signature in blue ink that reads "Andrew M. Mitchell".

President's Welcome Message

I would like to extend a very warm welcome to members and guests attending the 2013 Pumpers Expo & Picnic. It goes without saying that this is the highlight of the year and gives all those associated with the industry an opportunity to get together on a social basis with their families to exchange ideas and find out what is new.

This year, the CPAA Management Committee has engaged the services of an events organiser, Pix Jonasson of Success Dynamics, to ensure the day is as successful as possible along with the supporting magazine to ensure this once again becomes a must attend weekend every year.

I would also like to thank all those companies that have supported the magazine with advertising and by coming along to exhibit their pumps and products, without their generous support the weekend activities and amusements would not be possible.

The Committee has decided to hold the CPAA Annual General Meeting AGM and General Meeting GM on Monday morning 28th October following the Expo. This will hopefully allow interstate visitors to stay an extra night to attend the meeting, and then catch their flights home by mid-afternoon ready for business on Tuesday morning.

We hope this will enable more members to attend the AGM and GM, and have some input to the direction and issues faced by the CPAA. The Committee would like to formally encourage as many members as possible to attend and participate in the weekend's events as well as the AGM.

Australian Standards AS 2550.15:

Anthony Mattar, the CPAA-appointed representative, along with observer, Peter Loveday, attended the Draft Standards meeting on 4th July 2013. A number of requests were made to the Standards Committee, the most important was to reword clause 7.4.4. enabling the six-year rule strip down rule to be extended to 10 years if certain criteria has been met. At the time of writing, the CPAA's request had not been adopted by Standards Australia. We are hoping that the new Standard is published prior to the Expo, so that members can be informed of the outcome. See Page 24 & 25 Standards by CPAA representative Anthony Mattar.

Industry Representation:

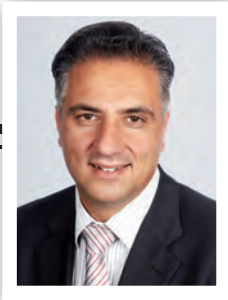

The Concrete Pumping Association of Australia Inc. (CPAA) is currently incorporated in NSW. In order for the CPAA to be an organisation that can truly represent all of its members from all States to all governments and regulators, the Association has received independent legal advice that it will necessary to be registered as an ASIC based entity.

This change will require an Extraordinary General Meeting (EGM) of members. In anticipation this has been scheduled for 25th March 2014 in Sydney with the intent of transferring to an ASIC-based company by 30th June 2014. The new not-for-profit organisation will be owned and controlled by the members and more detailed information will be circulated to all members in due course.

The Committee has been working very hard in the last 12 months, with regular Skype meetings. A new website is being planned with new content with the intent of keeping members better informed and more up to date. In the meantime, stay safe, and keep pumping.

A handwritten signature in blue ink that reads "Andrew M. Mitchell".

Andrew Mitchell President CPAA

Mayor's Message For The Concrete Pumping Association of Australia

On behalf of Fairfield City Council, I would like to express my support for the Concrete Pumping Association of Australia (CPAA) Pumpers Expo and Picnic, once again taking place at Fairfield Showground.

The concrete pumping industry is an important one. Concrete pumping provides our City with strong infrastructure that our community relies on. Without it, residents' homes and businesses would not look the same.

There are businesses local to Fairfield City that deal with concrete pumping, and we are proud the CPAA Expo and Picnic will be held here to support their training and development.

The Expo and Picnic held at Fairfield Showground is a great way to learn about new technologies, updates in the industry and standards. It is also a chance to unwind; an occasion the whole family can enjoy.

Fairfield City welcomes all visitors, locals and trade professionals to Fairfield City. Please enjoy the CPAA Expo and Picnic. We hope to see you again next year.

Regards,

Frank Carbone
Mayor of Fairfield City

Milop Design and Consulting Pty Ltd

Research, development, design and analysis in concrete pumping equipment, construction machinery, and mechanical and steel structural equipment

In Concrete Pumping Equipment Milop engineers are your experts for

- analysis, design and modification concrete boom pumps, tower placing booms and support steel structures
- inspection, certification and assessment of concrete booms for continued operation
- load testing and certification of the concrete boom pump after 6 yearly maintenance in accordance to AS
- testing and certification of the concrete boom pump for "one side operation"
- machine failure analysis
- design verification of the truck concrete boom pump and tower placing boom in accordance to new regulation

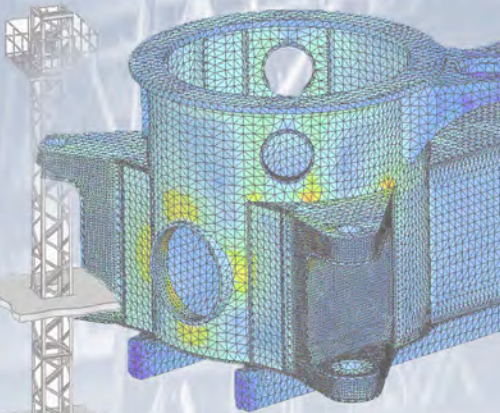

Tower cranes (AS 1418, design, modification, analysis)

Mobile drilling rigs for mining exploration (AS and API standards)

Pressure vessels design (AS 1210 and ASME standards)

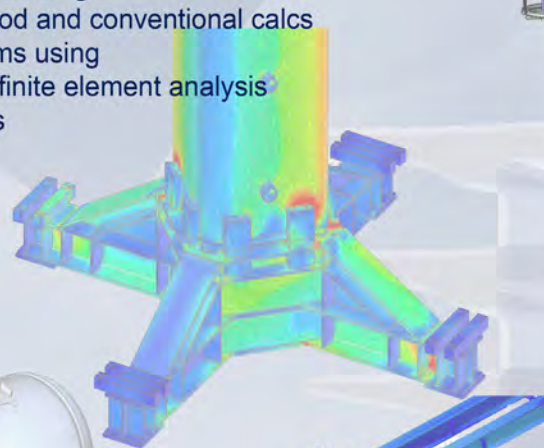

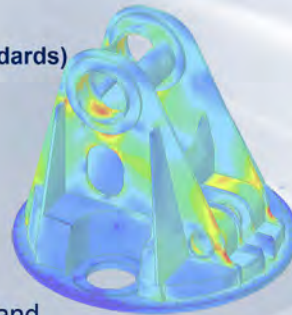

Mining industry (underground coal slotter and trencher)

Lifting Equipment (design and verification)

Engineering services

- analysis of steel structural and mechanical components using the finite element method and conventional calcs
- solving thermal problems using classical methods and finite element analysis
- expert witness services

Our engineers have 30 years experience in development and creatively applying their understanding of engineering principles. They have two patented solutions in cranes, concrete placing boom and construction equipment.

2010 and 2011 Pumpers Picnic Sydney Fairfield

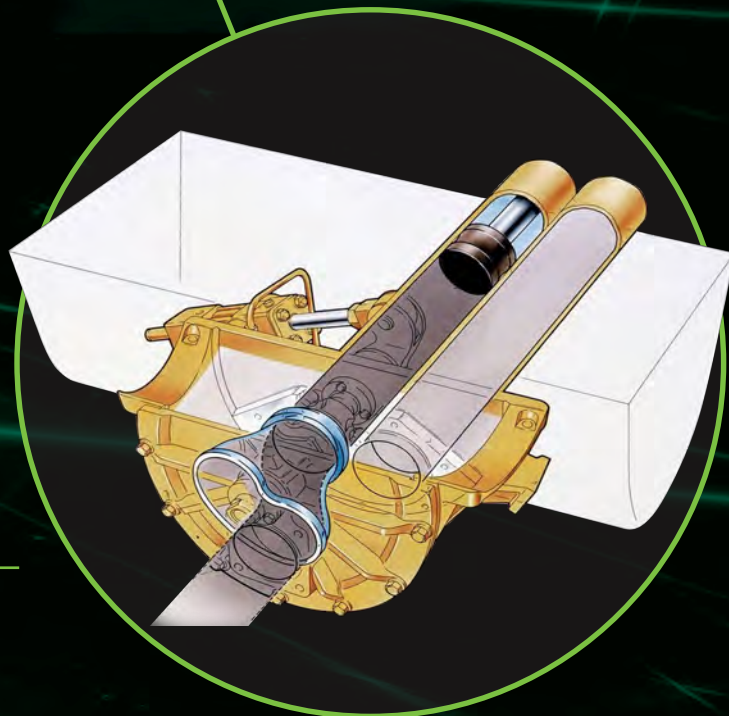

THE ROCK CONCRETE VALVE

PUMP MORE PROFITABLY WITH SCHWING

The heart of any concrete pump is the valve system that directs concrete from the cylinders to the pipeline. The concrete valve's performance has a major effect on fuel economy, ability to pump difficult mixes, service life of wear parts and therefore, business profitability.

Only SCHWING offers the **ROCK CONCRETE VALVE**, famous worldwide for its incomparable ability to handle the widest variety of mixes more efficiently than any other system.

- **FACT:** The Rock Valve has no internal restrictions to inhibit concrete flow. The reduction to the outlet occurs concrete-to-concrete, not concrete-to-steel as in other valves.
- **BENEFIT:** The Rock Valve demands less power to pump which reduces fuel consumption, wear parts and service costs. There is a clear line of sight from the outlet to the piston rams, making clean out faster and easier, conserving water.
- **FACT:** Forces inside the Rock Valve push the cutting ring against the wear plate, providing a more effective seal. An effective seal is critical to reduce the loss of fines and liquid necessary for lubrication.
- **BENEFIT:** SCHWING requires less pressure to pump concrete. Its superior sealing effect maintains better lubrication to reduce potential for blockages.
- **FACT:** The Rock Valve is completely balanced in the hopper.
- **BENEFIT:** Reduced stressing of the shaft, the valve and the hopper optimises service life and fuel economy.
- **FACT:** In addition to its longer service life, the Rock Valve can be rebuilt when worn.
- **BENEFIT:** Reduced parts cost, service labour and downtime.

Top gear. Great p

Top quality, fully rebuilt and certified concrete pump

At Global Beton Equipment we're backing Australia's concrete pumpers.

We are a specialist in scouting top quality booms and pumps in the US and making these available for Australian customers. This gives you access to an American fleet estimated at 8,000 concrete pumps and placement booms.

We select our pumps from responsible owners that we know. We strip them down and rebuild them ready for work the moment they arrive in Australia.

We stand behind our customers with training, finance, technical support and assistance with regulatory permits.

We can provide placement booms for your truck mounts

YEARLY INSPECTIONS & RECERTIFICATIONS, REPAIRS & TECHNICAL ADVICE

Work Cover Targets Safe Operation

WorkCover NSW is currently undertaking its High Consequence/Low Frequency (HCLF) verification program for the 2013/14 period. HCLF incidents are those that occur infrequently but can have a very large human, social, environmental and/or economic impact on a workplace, industry sector or the NSW economy.

One part of the 2013/14 program will focus on the mechanical integrity and safe operation of truck mounted and fixed concrete boom pumps. The program will consist of verification inspections that are undertaken both at home base (mechanical integrity and systems) and on site (safe operation). Inspectors will be completing verification checklists that focus on the high risk areas associated with the operation of this type of plant and will be verifying compliance to relevant work health and safety (WHS) legislation.

The program will be implemented right across the state of NSW and consultation has occurred with a number of industry stakeholders and relevant industry associations. WorkCover is committed to assist in building the capacity of the whole industry to comply with relevant WHS legislative requirements and to ensure a safe and productive industry sector.

Inspectors will generally be contacting company representatives and organising the site visits prior to any verification visits, however there will also be occasions when inspectors will complete verification checklists on equipment that is on a site they are visiting for a different purpose. For any further information required in relation to this program you can contact Daniel Beavon, Team Coordinator - Construction Services on 9598 3317.

WorkCover currently also offers a number of free services that can assist you in improving your WHS systems including workplace advisory visits, workshops and presentations. Attendance at these events can also provide an opportunity for you to become eligible for a \$1000 rebate in relation to the purchase of safety equipment or improvements to systems that you make as a result of that attendance. For more information go to the WorkCover website at www.workcover.nsw.gov.au

Standards Report

AS 2550.15 Draft

Major Inspections and Strip Down

On the 23 January 2013, the DRAFT document was released by Standards Australia.
The review of this document sat dormant for a number of years.

Industry stakeholders were involved in the review, and had previously made revisions to the AS 2550.15 – 1994.

The CPAA formed a working sub-committee, and the CPAA website was updated with a link to the Draft document, and members were encouraged to review and comment on the document themselves.

The CPAA working sub-committee held a total of 14 separate Skype meetings over a period of 2 months, and they actively reviewed and sought to make amendments to the DRAFT.

Industry members were lobbied, and the CPAA requested representation on the Standards Australia technical sub-committee, the people who review and decide what goes into the completed standard.

Upon acceptance, the CPAA elected 2 people to represent the interests of pumpers alike at the upcoming Standards Australia review meeting.

Anthony Mattar (Belconnen Concrete) was elected to represent the CPAA, and Peter Loveday (Coastwide Pumping) was elected as an observer.

The basis of the CPAA submission is as follows:

- Provide representation on behalf of CPAA members.
- Focus and promote **best practice**, consistency and industry standards and compliance in the concrete pumping industry.
- Bring the DRAFT into line with and reference to current requirements; including statutory regulations, codes of practices.
- Provide a forum for uniformity of regulatory safety and standards within the concrete pumping industry in Australia.
- Give clarity to proposed sections of the DRAFT in particular the following:
 - **Section 1 – SCOPE AND GENERAL**
 - Definitions
 - **Section 3 – SELECTION OF CONCRETE PLACING EQUIPMENT**
 - General
 - **Section 6 – ERECTION AND DISMANTLING**
 - Pipeline Cleaning Procedure
 - Concrete Hopper Cleaning
 - **Section 7 – MAINTENANCE, INSPECTION, ASSESSMENT AND REPAIR**
 - Logbooks
 - Repair
 - Inspection and Assessment

Of the entire DRAFT document the most contentious item was Section 7.4.4 – Major inspection and assessment for safe use.

Whether you choose to accept it, adhere to it or not, the current AS 2550.15 – 1994 stipulates that all concrete boom pumps MUST be fully stripped down!

Australian Standards are not legal documents, yet they form part of the numerous and integral documents, which can be used in a prosecution.

A concrete pump owner/operator must consider a wide range of standards, other standards in a set, manufacturers' guidelines and safety bulletins/updates, technical documents, actual wear and tear, and more importantly your obligations under the WHS Act, Regulation and relevant Codes of Practice.

In more recent times, comments and concerns have related to the confusion surrounding the 6-year rule, whether financial/commercial or of a legal/obligatory nature.

All owners and operators need to be vigilant as to how and what they do.

Image 1 below, identifies the hierarchy of these documents.

At the time of writing this article, the Draft AS 2550.15 has still not been approved for release by the AS sub-committee.

Safety Products

The Concrete Pumping Association has designed a range of safety products in accordance with the National safety regulating body's code of practice and they are distributed to members and non-members for the benefit of the concrete pumping industry in Australia.

Logbooks

Log Books are available for both Boom and Line pumps. They are designed to enable owners and operators to maintain their machines and their records in accordance with the current standards and Code of Practice.

An office copy logbook is also available so that the white copy of each page from the pumps logbook can be filed in the office for safe keeping.

Safety Stickers

The Association has available for purchase top-quality long-lasting safety stickers. These are available to members and non-members. Members save approximately 30%

The Boom Pump kit includes 43 stickers. The Line Pump kit includes 11 stickers.

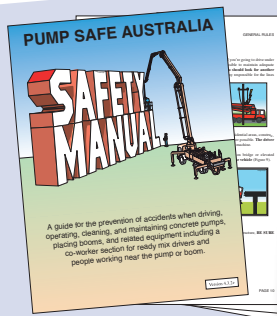

Detailed instructions are included in each kit as to where to place the stickers.

Safety Manuals

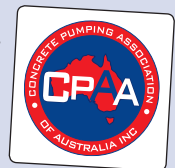

The A5 Safety Manuals fits easily into the glove box for handy reference.

They are designed to prevent accidents and can be used for induction training.

CPAA Sticker

This **LARGE** sticker is supplied as part of the Membership Kit when joining the Association Inc. and after membership payment has been received.

Ordering Information

This can be found on the Association's website cpassoc.com.au which includes a prefilled order.

2011 Pumpers Picnic Sydney Fairfield

Selling a concrete pump is just the start of my job. The real work starts with helping the buyer get financing, train their staff and obtain approvals. Australian customers just want to pump concrete safely and efficiently. They want to know they can pick up the phone any time of day or night and help is available.

Phil Serre is President and Chief Executive of Global Beton Equipment, Inc. In twenty years with Schwing America Phil has worked on every continent and directed concrete pumping on some of the world's largest construction projects. Phil knows concrete pumping and he knows Australia.

***Top gear.
Great price.
Full Noise.***

Nation Towers, Abu Dhabi 2009
